

Quiz 1B – iostream and variables

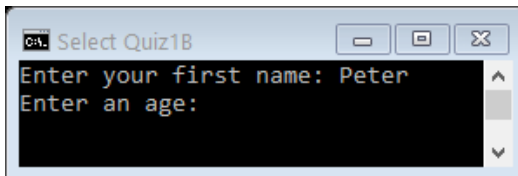

Write a complete C++ program using console input and output, string variables.

Program requirement:

- Comment in the header and to each line of the program
- Request user to enter a first name
- Request user to enter an age
- Print the user first name with the age. When the C++ file is compiled and ran, it should show the following:

If *Peter* is typed and then press the Enter key:

If *30* is typed and then press the Enter key:
